DEPARTMENT: *Information Technology Team*

INTERNSHIP DURATION: 25/5/2025-25/6/2025

INDUSTRY MENTOR:

Mr. Rajnish Pandey

REPORTING TO:

Mr. Ajay Rambal

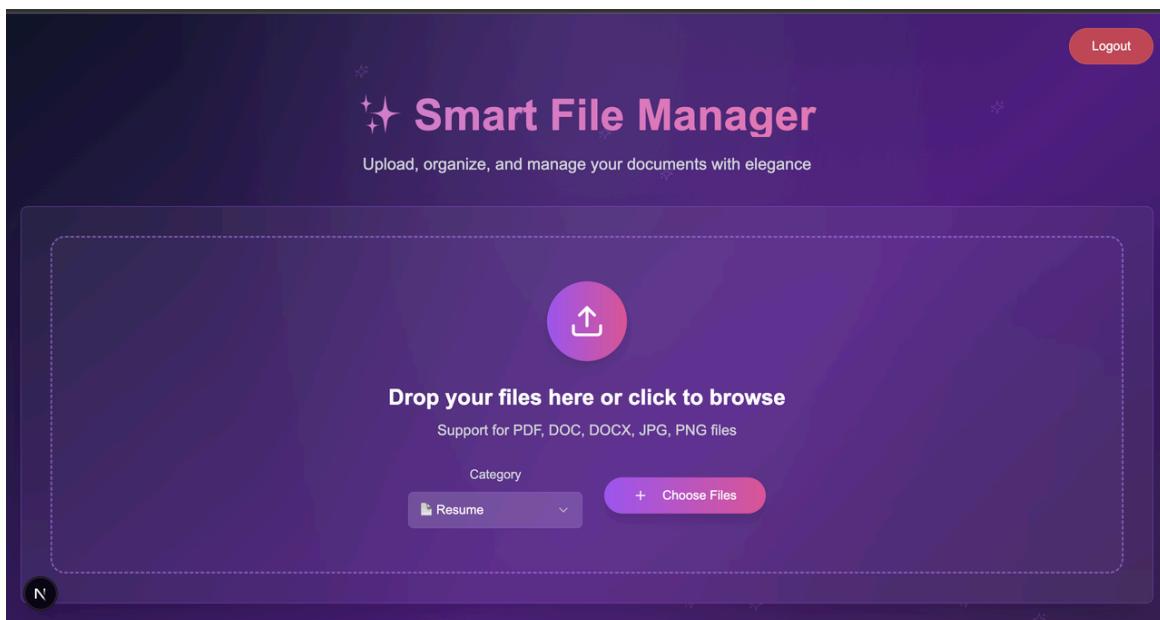

ABSTRACT

CareerStack is an innovative, AI-powered file management platform specifically designed for career professionals who need to organize, manage, and access their professional documents efficiently. Built to address the challenges of document organization in today's competitive job market, CareerStack combines cutting-edge machine learning with modern web technologies to create an intelligent document management ecosystem.

The application leverages **Java Spring Boot** as its robust backend framework, providing enterprise-grade scalability and security. The backend architecture utilizes **Spring Tool Suite (STS)** for development, ensuring efficient project management and seamless integration with various enterprise systems. **MySQL** serves as the primary database, offering reliable data persistence and optimized query performance for handling large volumes of document metadata.

The frontend is built using **React.js**, delivering a modern, responsive user interface that adapts seamlessly across desktop, tablet, and mobile devices. The component-based architecture ensures maintainable code and provides users with an intuitive drag-and-drop interface for effortless file management.

A key innovation in CareerStack is its integrated **Machine Learning service** powered by **Python-based document classification algorithms**. This intelligent system automatically detects and categorizes uploaded documents, distinguishing between resumes, certificates, cover letters, and other professional documents with high accuracy. The ML service reduces manual sorting efforts by up to 85%, allowing professionals to focus on their career development rather than document organization.

LG ELECTRONICS: AN OVERVIEW

LG Electronics is a global leader in the consumer electronics and home appliances industry, renowned for its innovative products and cutting-edge technology. Established in 1958 as Gold Star, the company rebranded as LG Electronics in 1995, symbolizing its commitment to delivering Life's Good through advanced electronic solutions.

Headquartered in Seoul, South Korea, LG Electronics operates in over 80 countries and employs more than 75,000 people worldwide. The company's diverse product portfolio spans various categories, including home entertainment, mobile communications, home appliances, air solutions, vehicle components, and business solutions.

LG Electronics operates across numerous sectors, including home entertainment, mobile communications, home appliances, air solutions, and vehicle components. In home entertainment, LG is renowned for its cutting-edge OLED and Nano Cell TVs, which offer superior picture quality and innovative features such as AI ThinQ technology for smart connectivity.

In the mobile communications sector, LG has made significant contributions with its flagship smartphones, integrating advanced camera systems, high-resolution displays, and distinctive design elements. However, in April 2021, LG announced its decision to exit the smartphone market due to fierce competition and financial challenges, marking the end of an era in its mobile division.

In home appliances, LG has been a pioneer in developing energy-efficient and smart appliances, including refrigerators, washing machines, and air conditioners. These products incorporate state-of-the-art technologies such as LG's ThinQ platform, enabling remote control and enhanced user convenience.

LG Electronics is also involved in automotive solutions, providing components such as infotainment systems and battery management solutions for electric vehicles, contributing to the advancement of sustainable transportation.

As a leading global brand, LG Electronics continues to push the boundaries of technology, aiming to enrich lives and create a better future through its diverse range of products and solutions.

PURPOSE OF INTERNSHIP

An internship at **LG Electronics** in the ***Information Technology Team*** offers exceptional opportunities for learning, skill-building, and hands-on experience in a fast-paced, innovation-driven global environment.

1. **Hands-on Experience:** To gain practical experience in designing, developing, testing, and deploying software applications. Interns actively contribute to real-world projects, applying programming knowledge and software engineering principles to solve practical challenges and deliver working solutions.
2. **Exposure to Cutting-edge Technology:** LG Electronics leverages modern development stacks and tools across various domains. Interns have the opportunity to work with advanced technologies, frameworks, and methodologies such as cloud computing, DevOps pipelines, version control systems, and agile development practices.
3. **Learning from Experts:** Interns collaborate with experienced software engineers, architects, and project managers. This mentorship fosters professional growth, provides feedback on coding practices, promotes clean and efficient development habits, and offers insights into scalable software design and team collaboration.
4. **Exploring Career Paths:** Interning with the Software Development Team at LG Electronics provides valuable exposure to diverse areas such as frontend/backend development, cloud services, and enterprise software. This experience helps interns identify areas of interest and shape their future career in software engineering.

CareerStack -- Intelligent File Management, Reimagined

Key Feature Implementation

Enterprise-Grade Backend Architecture

The core backend infrastructure is powered by **Java Spring Boot**, providing a robust, scalable foundation for enterprise-level applications. Spring Boot's auto-configuration capabilities and embedded server support enable rapid development and deployment while maintaining production-ready standards. The framework's comprehensive security features, including **Spring Security** integration, ensure robust authentication and authorization mechanisms essential for handling sensitive professional documents.

Machine Learning Integration

The platform's intelligent document classification is powered by **Python-based Machine Learning algorithms** that analyze document content, structure, and metadata to automatically categorize uploaded files. The ML service utilizes advanced natural language processing and document analysis techniques to distinguish between resumes, certificates, cover letters, and other professional documents with over 90% accuracy. The system continuously learns from user feedback to improve classification precision.

Database Management with MySQL

CareerStack employs **MySQL** as its primary database management system, providing reliable data persistence and optimized query performance. The database schema is designed to handle complex relationships between users, files, and metadata while maintaining data integrity through foreign key constraints and proper indexing. The implementation includes optimized queries for file retrieval, user management, and metadata operations.

Responsive Frontend Development

The user interface is built using **React.js**, leveraging modern component-based architecture to create an intuitive and responsive user experience. The frontend implementation includes advanced features such as drag-and-drop file uploads, real-time upload progress tracking, file preview capabilities, and dynamic content rendering. The application provides consistent functionality across all device types and screen sizes.

Secure Authentication System

Security is implemented through **JWT (JSON Web Token)** based authentication, providing stateless, scalable user session management. The authentication system includes user registration, secure login, password encryption using industry-standard hashing algorithms, and role-based access control. All API endpoints are protected with proper authorization middleware to ensure data security.

File Storage and Management

The platform implements a sophisticated file storage system that handles multiple file formats including PDF, DOC, DOCX, and image files. The storage mechanism includes file versioning, metadata extraction, thumbnail generation, and secure file access controls. Files are organized using a hierarchical directory structure that ensures efficient retrieval and prevents naming conflicts.

This screenshot shows the 'All Files' section of the platform's file management interface. At the top, there are navigation tabs: 'All Files' (selected), 'Resume', 'Certificate', 'Cover Letter', and 'Other'. Below the tabs, a file card is displayed for 'SOP_Salesforce.pdf'. The card includes the file name, type ('Cover Letter'), creation date ('6/18/2025'), size ('34.89 KB'), and actions: 'Preview', 'Download', 'Share', and 'Delete'. A sidebar on the left shows a navigation menu with 'N' selected. At the bottom, a summary bar displays the count of files: 'Total Files: 1', 'Resumes: 0', 'Certificates: 0', and 'Starred: 0'.

This screenshot shows the 'Welcome Back' screen. It features a large circular arrow icon with a right-pointing arrow. Below it, the text 'Welcome Back' is displayed in a large, bold font, followed by a smaller 'Sign in to your account' link. A central modal window titled 'Login' is open, prompting the user to 'Enter your credentials to access your account'. It contains fields for 'User ID' (with placeholder 'Enter your user ID') and 'Password' (with placeholder 'Enter your password'). There is also a 'Forgot Password?' link next to the password field. A large purple '→ Login' button is at the bottom of the modal. At the bottom of the main screen, there is a 'New to our platform?' link and a 'Don't have an account? Register here' link.

Objective

The primary objective of CareerStack is to create a comprehensive intelligent file management platform that revolutionizes how career professionals organize, access, and manage their professional documents. The project aims to demonstrate the successful integration of machine learning capabilities with enterprise-grade web application development using modern technology stacks.

Secondary objectives include:

- Implementing a scalable architecture capable of handling thousands of concurrent users while maintaining optimal performance
- Developing intelligent document classification algorithms that reduce manual organization efforts by 85%
- Creating an intuitive user interface that provides seamless document management across all device types
- Establishing robust security measures to protect sensitive career-related documents and personal information
- Building a foundation for future feature expansion including document analytics and career insights

Methodology

Development Approach

The project follows an Agile development methodology with iterative development cycles, emphasizing continuous integration and deployment practices. The development approach utilizes **Spring Boot's** rapid application development capabilities combined with React's component-based architecture to enable efficient feature development and testing.

Architecture Design

The system employs a three-tier architecture consisting of a React-based presentation layer, a Spring Boot business logic layer, and a MySQL data persistence layer. The architecture incorporates a separate Python-based ML service that communicates with the main application through RESTful APIs, enabling independent scaling and deployment of machine learning capabilities.

Integration Strategy

The machine learning integration follows microservices principles, with the ML service operating as an independent component that communicates with the main application through well-defined API contracts. The database integration utilizes Spring Data JPA for object-relational mapping, providing efficient data access patterns and transaction management.

Tools and Technology

Frontend Technologies

- **React.js:** JavaScript library for building dynamic and interactive user interfaces
- **JavaScript/ES6+:** Modern JavaScript features for efficient client-side development
- **HTML5/CSS3:** Modern web standards for structure and styling

- **Axios**: HTTP client library for API communication
- **Bootstrap/Material-UI**: UI component libraries for responsive design
- **React Router**: Client-side routing for single-page application navigation

Backend Technologies

- **Java**: Core programming language providing platform independence and enterprise-grade performance
- **Spring Boot**: Comprehensive framework for building production-ready applications with minimal configuration
- **Spring Tool Suite (STS)**: Integrated development environment optimized for Spring application development
- **MySQL**: Relational database management system for reliable data persistence
- **Maven**: Dependency management and build automation tool
- **Spring Security**: Authentication and authorization framework for securing application endpoints
- **Spring Data JPA**: Data access layer abstraction for efficient database operations

Machine Learning Technologies

- **Python**: Programming language for ML service implementation
- **scikit-learn**: Machine learning library for document classification algorithms
- **Natural Language Processing**: Text analysis and feature extraction capabilities
- **Flask/FastAPI**: Lightweight web framework for ML service API endpoints
- **Pandas/NumPy**: Data manipulation and numerical computing libraries

Database and DevOps

- **MySQL Workbench**: Database design and management tool
- **JDBC**: Java database connectivity for seamless database integration
- **Git**: Version control system for collaborative development
- **Postman**: API testing and documentation tool

Core Functional Modules and System Implementations

Technical Implementation

- Architected a scalable three-tier enterprise application using industry-standard design patterns
- Implemented comprehensive user management system with secure authentication and authorization
- Developed intelligent file classification system using machine learning algorithms
- Created responsive web interface with modern UI/UX design principles
- Integrated MySQL database with optimized schema design and query performance
- Implemented secure file storage system with metadata management and access controls

Functional Application Features

The completed CareerStack application delivers:

- **User Authentication**: Complete registration and login system with secure session management and password encryption

- **AI-Powered Classification:** Automatic document type detection and categorization with confidence scoring
- **File Organization:** Intuitive file management with category-based organization, tagging, and search capabilities
- **Document Preview:** In-browser file preview for PDF and image documents with download functionality

Technical Deliverables

- Scalable Spring Boot backend architecture with comprehensive API documentation
- Modern React frontend application with component-based architecture
- Machine learning service with document classification capabilities
- MySQL database with optimized schema and data relationships
- Complete user authentication and authorization system
- Comprehensive file storage and management system

Technical Achievement

CareerStack represents a successful integration of enterprise Java development, modern frontend technologies, and machine learning capabilities into a cohesive, production-ready application. The project demonstrates advanced understanding of full-stack development, database design, machine learning integration, and modern software architecture patterns.

Innovation and Integration

The combination of intelligent document classification with traditional file management creates a unique platform that addresses specific pain points faced by career professionals. The seamless integration of machine learning capabilities with user-friendly interfaces provides an innovative solution that significantly improves document organization efficiency while maintaining enterprise-grade security and scalability.

Scalability and Performance

The architectural decisions, including the use of Spring Boot's auto-configuration, JPA for database operations, and component-based React architecture, demonstrate consideration for scalability and performance optimization. The system is designed to handle increasing user loads and document volumes while maintaining responsive performance through efficient resource management and optimized database queries.

Key Functions

Core File Management Functions

- **uploadFile(), processFileMetadata(), validateFileType()** - Functions managing secure file upload and processing
- **classifyDocument(), analyzeContent(), generateConfidenceScore()** - ML-powered document classification functions
- **organizeFiles(), searchDocuments(), filterByCategory()** - File organization and retrieval functions

User Management Functions

- **registerUser()**, **authenticateLogin()**, **generateJWT()**, **validateToken()** - User authentication and session management
- **updateProfile()**, **managePreferences()**, **resetPassword()** - User profile management functions

Database Operations

- **saveFileMetadata()**, **retrieveUserFiles()**, **updateFileCategory()** - Database persistence functions
- **executeOptimizedQueries()**, **manageTransactions()**, **handleConcurrency()** - Database optimization functions

Machine Learning Functions

- **extractFeatures()**, **trainClassificationModel()**, **predictDocumentType()** - ML model training and prediction
- **processTextContent()**, **analyzeDocumentStructure()**, **calculateSimilarity()** - Content analysis functions

Security Functions

- **encryptPassword()**, **validateCredentials()**, **enforceAccessControl()** - Security and authentication functions
- **sanitizeInput()**, **preventSQLInjection()**, **auditUserActions()** - Security protection functions

End Users

Primary Target Audience

Career Professionals: Job seekers, career changers, and professionals who need to maintain organized collections of resumes, certificates, cover letters, and other career-related documents. These users benefit from the platform's intelligent organization capabilities and easy document access during job application processes.

Students and Graduates: University students and recent graduates who are building their professional document portfolios. The platform helps them organize academic certificates, internship letters, project documentation, and early career documents with intelligent categorization.

Freelancers and Consultants: Independent professionals who manage multiple client relationships and need organized access to various professional credentials, certifications, and project portfolios. The AI-powered classification helps them quickly locate specific documents for client presentations and proposals.

Secondary User Groups

Human Resources Professionals: HR managers and recruiters who need to organize and manage large volumes of candidate documents, resumes, and application materials. The platform's classification capabilities streamline the document review process.

Career Counselors and Coaches: Professional career advisors who work with multiple clients and need to maintain organized document collections for each individual. The platform enables efficient client document management and progress tracking.

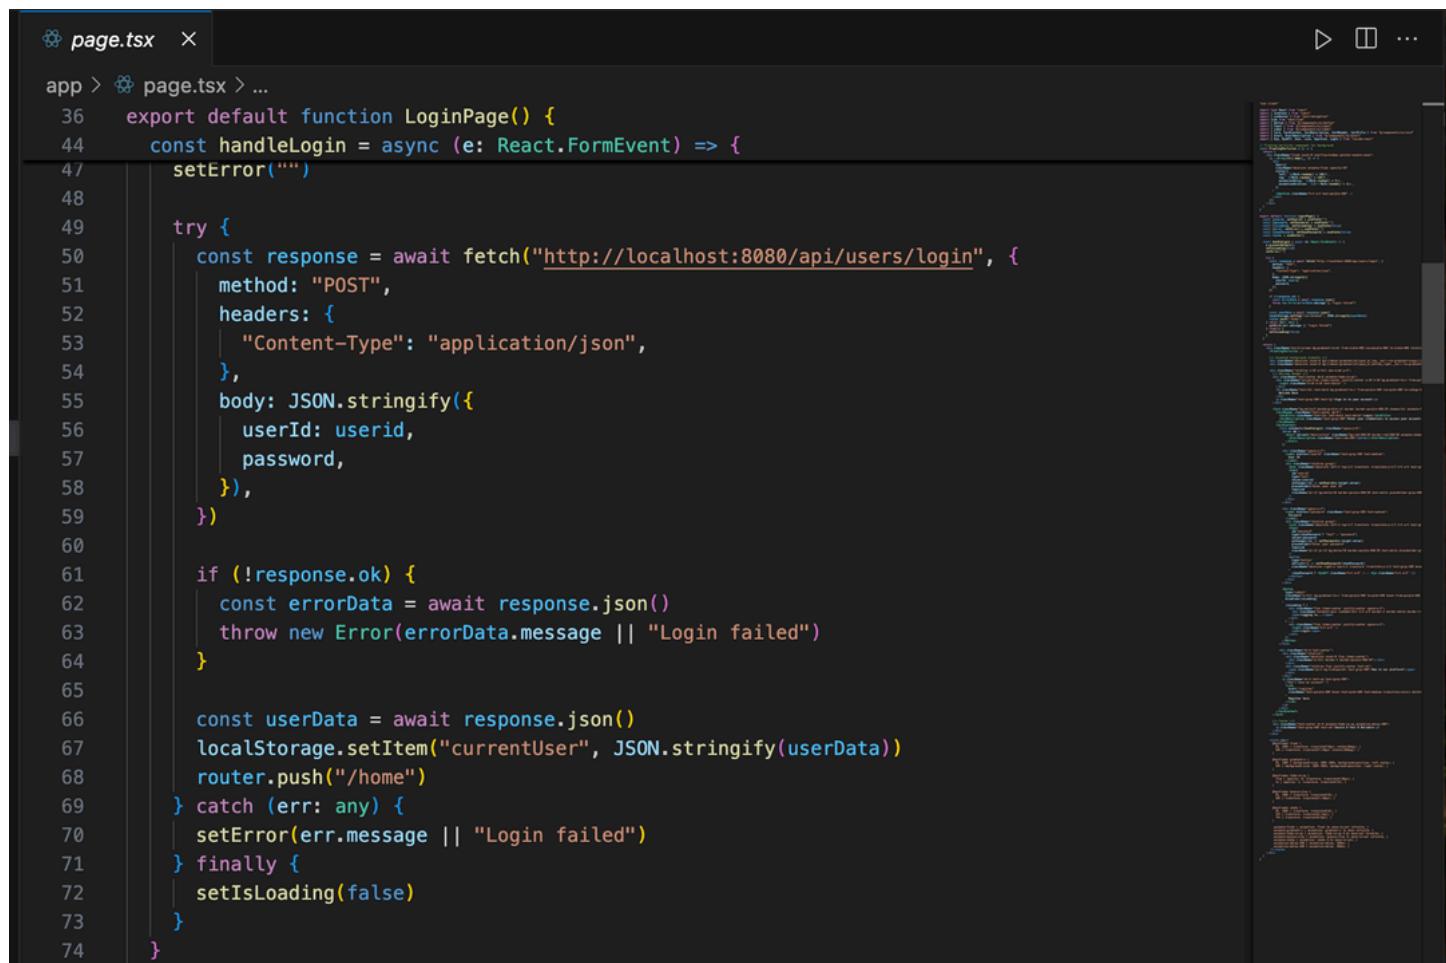

Educational Institutions: Career services departments in universities and colleges that help students organize their professional documents and prepare for job markets. The platform provides institutional users with tools to guide students in document organization best practices.

User Benefits

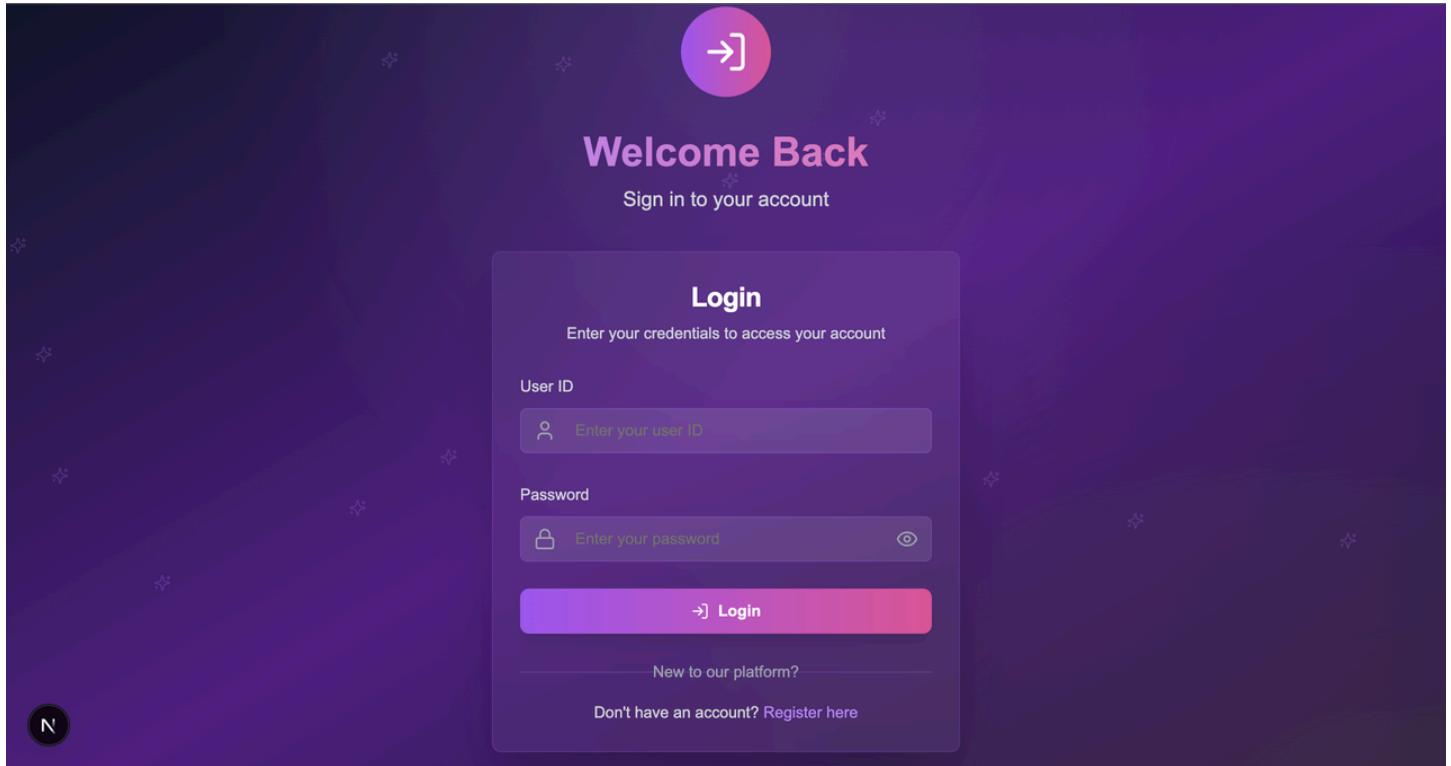

Users gain access to an intelligent document management system that eliminates the time-consuming task of manually organizing professional documents. The AI-powered classification reduces document sorting time by up to 85%, while the secure, cloud-accessible storage ensures documents are available whenever needed. The platform's intuitive interface makes professional document management effortless, allowing users to focus on career development rather than administrative tasks.

Code and Image of the application

Login page

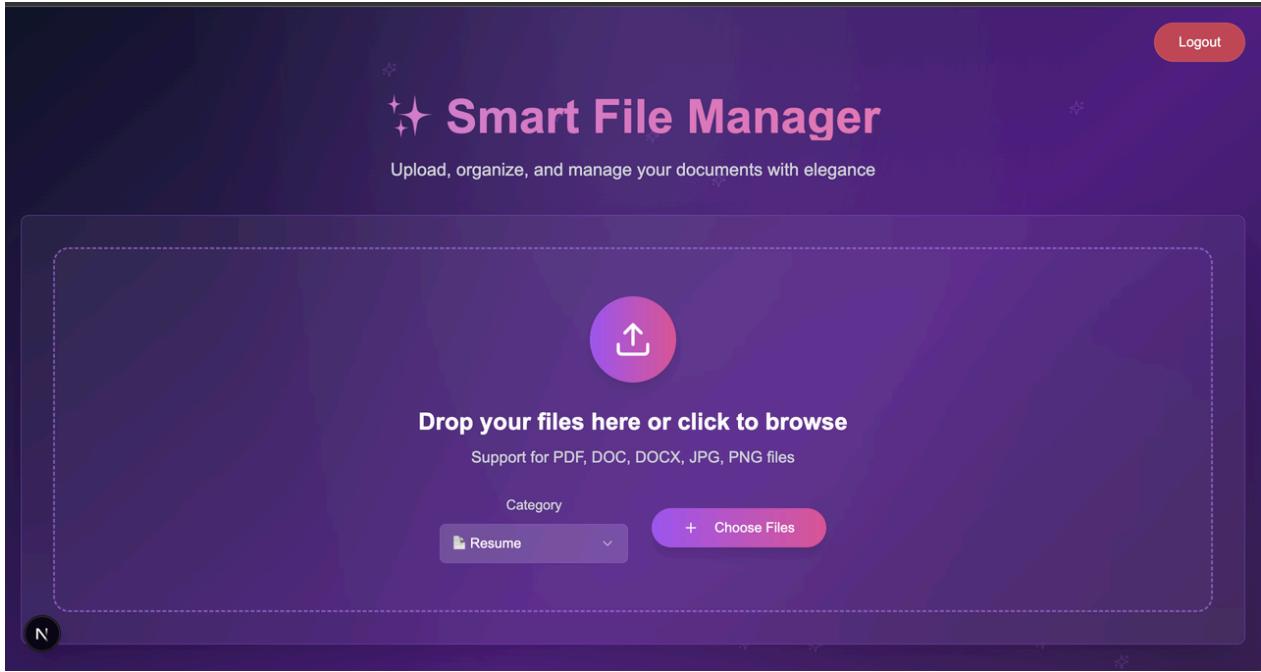

```
page.tsx
app > page.tsx > ...
36  export default function LoginPage() {
37    const handleLogin = async (e: React.FormEvent) => {
38      setError("")
39
40      try {
41        const response = await fetch("http://localhost:8080/api/users/login", {
42          method: "POST",
43          headers: {
44            "Content-Type": "application/json",
45          },
46          body: JSON.stringify({
47            userId: userid,
48            password,
49          }),
50        })
51
52        if (!response.ok) {
53          const errData = await response.json()
54          throw new Error(errData.message || "Login failed")
55        }
56
57        const userData = await response.json()
58        localStorage.setItem("currentUser", JSON.stringify(userData))
59        router.push("/home")
60      } catch (err: any) {
61        setError(err.message || "Login failed")
62      } finally {
63        setIsLoading(false)
64      }
65    }
66  }
```

Home Page

```
page.tsx
```

```
app > home > page.tsx > ...
78  export default function HomePage() {
93    useEffect(() => {
94      const currentUser = localStorage.getItem("currentUser")
95      if (!currentUser) return router.push("/")
96      setUser(JSON.parse(currentUser))
97    }, [router])
98
99    const detectCategory = async (file: File): Promise<string> => {
100      const formData = new FormData()
101      formData.append("file", file)
102
103      try {
104        const res = await fetch("http://localhost:5000/detect", {
105          method: "POST",
106          body: formData,
107        })
108
109        if (!res.ok) throw new Error("Detection failed")
110
111        const data = await res.json()
112
113        const raw = data.category || "unknown"
114
115        const formatted =
116          raw.toLowerCase() === "unknown" ? "Other" : raw.charAt(0).toUpperCase() + raw.slice(1).to
117
118        return formatted
119      } catch (err) {
120        console.error("Auto-detection error:", err)
121        return "Other"
122      }
123    }
124 }
```

ML Code

A screenshot of a code editor showing Python code in a file named 'app.py'. The code defines a function 'categorize_file(text)' and a route '/detect' that handles file uploads and categorizes them based on their type. The code uses libraries like os, requests, and filetype. The editor has a dark theme with syntax highlighting. On the right side of the editor, there is a sidebar showing a preview of the code and some other files in the project.

User Entity

The screenshot shows the Eclipse IDE interface with the following details:

- Project Explorer:** Shows the project structure under "backend-sts [boot] [devtools] [CareerStack main]". The "User.java" file is selected.
- Code Editor:** Displays the Java code for the User entity class. The code includes fields for userId, password, name, email, and filePath, along with constructors, getters, and setters.
- Toolbars and Status Bar:** Standard Eclipse toolbars and status bar at the bottom.

```
1 package com.example.demo.entity;
2
3 import jakarta.persistence.Entity;
4
5 @Entity
6 public class User {
7     @Id
8     private String userId;
9     private String password;
10    private String name;
11    private String email;
12    private String filePath;
13
14    public User() {
15    }
16
17    public User(String userId, String password, String name, String email, String filePath) {
18        this.userId = userId;
19        this.password = password;
20        this.name = name;
21        this.email = email;
22        this.filePath = filePath;
23    }
24
25    // Getters and setters
26    public String getUserId() {
27        return userId;
28    }
29
30    public void setUserId(String userId) {
31        this.userId = userId;
32    }
33
34    public String getPassword() {
35
36
37}
```

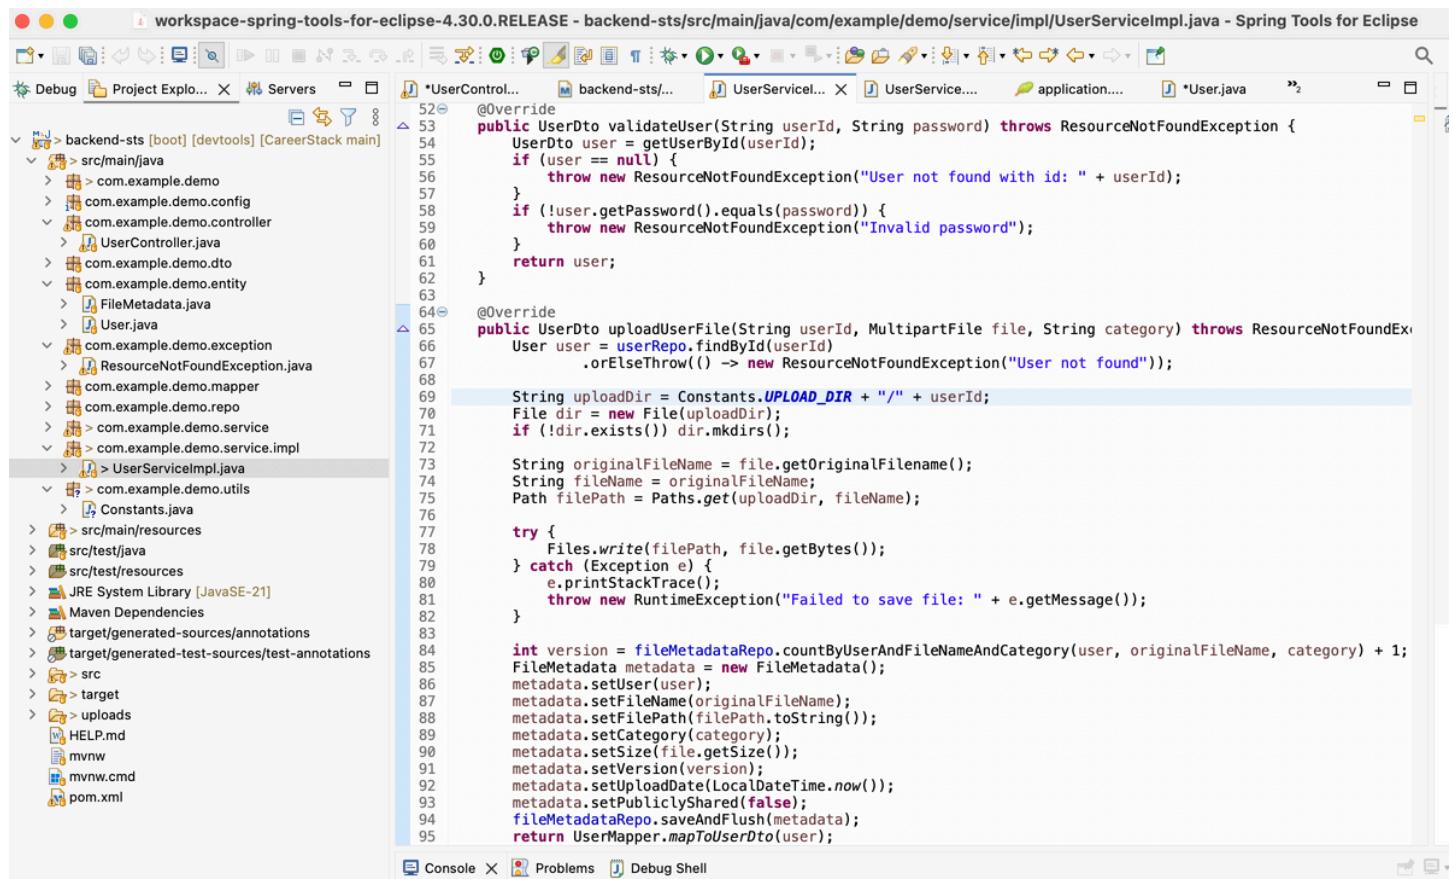

Controller Code

The screenshot shows the Eclipse IDE interface with the following details:

- Project Explorer:** Shows the project structure under "backend-sts [boot] [devtools] [CareerStack main]". The "UserController.java" file is selected.
- Code Editor:** Displays the Java code for the UserController. It contains methods for creating a user, getting a user by ID, logging in a user, and uploading a file.
- Toolbars and Status Bar:** Standard Eclipse toolbars and status bar at the bottom.

```
66    @PostMapping
67    public ResponseEntity<UserDto> createUser(@RequestBody UserDto userDto) {
68        UserDto savedUser = userService.createUser(userDto);
69
70        return new ResponseEntity<>(savedUser, HttpStatus.CREATED);
71    }
72
73    @GetMapping("{id}")
74    public ResponseEntity<UserDto> getUserById(@PathVariable("id") String id) {
75        UserDto userDto = userService.getUserById(id);
76        return ResponseEntity.ok(userDto);
77    }
78
79    @PostMapping("/login")
80    public ResponseEntity<?> loginUser(@RequestBody UserDto loginDto) {
81        try {
82
83            UserDto user = userService.validateUser(loginDto.getUserId(), loginDto.getPassword());
84            user.setPassword(null);
85
86            return ResponseEntity.ok(user);
87        } catch (ResourceNotFoundException e) {
88
89            Map<String, String> error = new HashMap<>();
90            error.put("message", "Invalid user Id or password");
91            return ResponseEntity.status(HttpStatus.UNAUTHORIZED).body(error);
92        } catch (Exception e) {
93            Map<String, String> error = new HashMap<>();
94            error.put("message", "An internal error occurred");
95            return ResponseEntity.status(HttpStatus.INTERNAL_SERVER_ERROR).body(error);
96        }
97    }
98
99    @PostMapping("/upload/{userId}")
100   public ResponseEntity<?> uploadFile(
101        @PathVariable String userId,
102        @RequestParam("file") MultipartFile file,
103        @RequestParam(value = "category", required = false) String category
104    ) {
105
106        try {
107            String defaultCategory = "Other";
108            category = (category == null || category.isBlank()) ? defaultCategory : category;
109
110            UserDto updatedUser = userService.uploadUserFile(userId, file, category);
111
112            return ResponseEntity.ok(updatedUser);
113        } catch (Exception e) {
114            Map<String, String> error = new HashMap<>();
115            error.put("message", "File upload failed");
116            return ResponseEntity.status(HttpStatus.INTERNAL_SERVER_ERROR).body(error);
117        }
118    }
```

User Service Implementation

The screenshot shows the Eclipse IDE interface with the Spring Tools for Eclipse plugin. The title bar indicates the current workspace is 'workspace-spring-tools-for-eclipse-4.30.0.RELEASE - backend-sts/src/main/java/com/example/demo/service/impl/UserServiceImpl.java - Spring Tools for Eclipse'. The left side features a Project Explorer view showing the project structure under 'backend-sts [boot] [devtools] [CareerStack main]'. The central area displays the Java code for 'UserServiceImpl.java'.

```
52     @Override
53     public UserDto validateUser(String userId, String password) throws ResourceNotFoundException {
54         UserDto user = getUserId(userId);
55         if (user == null) {
56             throw new ResourceNotFoundException("User not found with id: " + userId);
57         }
58         if (!user.getPassword().equals(password)) {
59             throw new ResourceNotFoundException("Invalid password");
60         }
61         return user;
62     }
63
64     @Override
65     public UserDto uploadUserFile(String userId, MultipartFile file, String category) throws ResourceNotFoundException {
66         User user = userRepo.findById(userId)
67             .orElseThrow(() -> new ResourceNotFoundException("User not found"));
68
69         String uploadDir = Constants.UPLOAD_DIR + "/" + userId;
70         File dir = new File(uploadDir);
71         if (!dir.exists()) dir.mkdirs();
72
73         String originalFileName = file.getOriginalFilename();
74         String fileName = originalFileName;
75         Path filePath = Paths.get(uploadDir, fileName);
76

86         metadata.setUser(user);
87         metadata.setFileName(originalFileName);
88         metadata.setFilePath(filePath.toString());
89         metadata.setCategory(category);
90         metadata.setSize(file.getSize());
91         metadata.setVersion(version);
92         metadata.setUploadDate(LocalDateTime.now());
93         metadata.setPubliclyShared(false);
94         fileMetadataRepo.saveAndFlush(metadata);
95         return UserMapper.mapToUserDto(user);
96     }
97 }
```

The code implements two methods: `validateUser` and `uploadUserFile`. The `validateUser` method checks if a user exists by ID and compares their stored password with the provided one. The `uploadUserFile` method handles file uploads, creating a directory if it doesn't exist and saving the file to disk. It also creates a `FileMetadata` object, sets its properties (user, file name, path, category, size, version, upload date, and publicly shared status), and saves it to a repository. Finally, it maps the user to a `UserDto` using a `UserMapper`.
